Regulating Patient Safety Jun 15 2022 Systematically improving patient safety is of the utmost importance, but it is

also an extremely complex and challenging task. This illuminating study evaluates the role of professionalism, regulation and law in seeking to improve safety, arguing that the 'medical dominance' model is ill-suited to this aim, which instead requires a patient-centred vision of professionalism. It brings together literatures on professions, regulation and trust, while examining the different legal mechanisms for responding to patient safety events. Oliver Quick includes an examination in areas of law which have received little attention in this context, such as health and safety law, and coronial law, and contends in particular that the active involvement of patients in their own treatment is fundamental to ensuring their safety.

Suicide Prevention May 27 2023 A practical and easy-to-use guide for healthcare professionals on the prevention, assessment and treatment of people at risk of suicide.

Cambridge Handbook of Psychology, Health and Medicine Nov 20 2022 Health psychology is a rapidly expanding discipline at the interface of psychology and clinical medicine. This new edition is fully reworked and revised, offering an entirely up-to-date, comprehensive, accessible, one-stop resource for clinical psychologists, mental health professionals and specialists in health-related matters. There are two new editors: Susan Ayers from the University of Sussex and Kenneth Wallston from Vanderbilt University Medical Center. The prestigious editorial team and their international, interdisciplinary cast of authors have reconceptualised their much-acclaimed handbook. The book is now in two parts: part I covers psychological aspects of health and illness, assessments, interventions and healthcare practice. Part II covers medical matters listed in alphabetical order. Among the many new topics added are: diet and health,

ethnicity and health, clinical interviewing, mood assessment, communicating risk, medical interviewing, diagnostic procedures, organ donation, IVF, MMR, HRT, sleep disorders, skin disorders, depression and anxiety disorders.

Health Risks and Developmental Transitions During Adolescence Mar 01 2021 This book focuses on developmental transitions during adolescence and young adulthood.

Essential Public Health Sep 18 2022 Effectively preventing disease and promoting health is a challenge addressed by this essential book for anyone working in healthcare.

***Just Health Aug 18 2022* In this book by the award-winning author of *Just Healthcare*, Norman Daniels develops a comprehensive theory of justice for health that answers three key questions: what is the special moral importance of health? When are health inequalities unjust? How can we meet health needs fairly when we cannot meet them all? Daniels' theory has implications for national and global health policy: can we meet health needs fairly in ageing societies? Or protect health in the workplace while respecting individual liberty? Or meet professional obligations and obligations of justice without conflict? When is an effort to reduce health disparities, or to set priorities in realising a human right to health, fair? What do richer, healthier societies owe poorer, sicker societies? *Just Health: Meeting Health Needs Fairly* explores the many ways that social justice is good for the health of populations in developed and developing countries.**

***Xenotransplantation and Risk Aug 30 2023* Some developing biotechnologies challenge accepted legal and ethical norms because of the risks they pose. Xenotransplantation (cross-species transplantation) may prolong life but may also harm the xeno-recipient and the public due to its potential to**

transmit infectious diseases. These trans-boundary diseases emphasise the global nature of advances in health care and highlight the difficulties of identifying, monitoring and regulating such risks and thereby protecting individual and public health. Xenotransplantation raises questions about how uncertainty and risk are understood and accepted, and exposes tensions between private benefit and public health. Where public health is at risk, a precautionary approach informed by the harm principle supports prioritising the latter, but the issues raised by genetically engineered solid organ xenotransplants have not, as yet, been sufficiently discussed. This must occur prior to their clinical introduction because of the necessary changes to accepted norms which are needed to appropriately safeguard individual and public health.

Quality and Risk Management in the IVF Laboratory Dec 30 2020 Updated edition of this bestselling book, now extended to include quality and risk management in the ART clinic.

Evaluating Health Risks Jun 27 2023 A major problem in health economics is how to give a value to changes in health. This is the first book to examine all the money measures that are used in such evaluations. Changes in health might be caused by medical treatments, by public safety programmes and by anti-pollution programmes, and the cost-benefit analysis of such programmes involves the use of money measures. The author defines the properties of these money measures, examining them in both a certain and a risky world. He evaluates available empirical approaches for the assessment of the value of health changes, and considers measures such as quality-adjusted life years (qalys) and healthy-years equivalents (hyes). This book raises the

important question of whether we are willing to pay the costs for our health care system. It will be of interest to advanced students of health economics and related disciplines, and will also be useful for professionals working on projects that affect human health.

The Promising Future of Public Health Mar 13 2022

Epidemiology originated during the Middle Ages when science-based medicine arose and medical schools were established. Clinically trained epidemiologists began to advance knowledge on human disease through intensive observations of their patients over time. Modern computing was quickly adopted by epidemiologists as an essential tool of modern medicine. Despite its key role in medicine, epidemiology-based teaching and research is now faltering, as professors emphasize the difficulties, rather than the advantages, of this critical branch of medicine. No other medical specialty can accurately track diseases in populations at risk, or evaluate the cost and quality of medical care. It can create clinical information systems for practising physicians, assess health risks in large population groups and evaluate unique subgroups at risk of disease. A major lesson from the COVID-19 experience is that enhancing the work of medical epidemiologists is crucial to the future of public health and clinical medicine. How this goal can be achieved is the central theme of this volume.

Probabilistic Risk Analysis Jan 28 2021 A graduate level textbook on probabilistic risk analysis, aimed at statisticians, operations researchers and engineers.

Invasive Species May 15 2022 With climate change and increasing globalisation of trade and travel, the risks presented by invasive pests and pathogens to natural

environments, agriculture and economies have never been greater, and are only increasing with time. Governments worldwide are responding to these increased threats by strengthening quarantine and biosecurity. This book presents a comprehensive review of risk-based techniques that help policy makers and regulators protect national interests from invasive pests and pathogens before, at, and inside national borders. Selected from the research corpus of the Centre of Excellence for Biosecurity Risk Analysis at the University of Melbourne, this book provides solutions that reflect scientific rigour coupled with practical, hands-on applications. Focusing on surveillance, stochastic modelling, intelligence gathering, decision making and risk communication, the contents combine the strengths of risk analysts, mathematicians, economists, biologists and statisticians. The book presents tested scientific solutions to the greatest challenges faced by quarantine and biosecurity policy makers and regulators today.

The Cambridge Handbook of Disaster Risk Reduction and International Law Aug 25 2020 The number, intensity, and impact of diverse forms of 'natural' and 'human-made' disasters are increasing. In response, the international community has shifted its primary focus away from disaster response to prevention and improved preparedness. The current globally agreed upon roadmap is the ambitious Sendai Framework for Disaster Risk Reduction 2015–2030, central to which is the better understanding of disaster risk management and mitigation. Sendai also urges innovative implementation, especially multi-sectoral and multi-hazard coherence. Yet the law sector itself remains relatively underdeveloped, including a paucity of supporting 'DRR law' scholarship and minimal cross-sectoral engagement.

Commonly, this is attributable to limited understanding by other sectors about law's dynamic potential as a tool of disaster risk mitigation, despite the availability of many risk-related norms across a broad spectrum of legal regimes. This unique, timely Handbook brings together global and multi-sector perspectives on one of the most pressing policy issues of our time.

The Business of Risk Apr 13 2022 Discusses the handling of risk in such diverse areas as project appraisal, the operation of financial institutions, the management of investment portfolios, gambling, medical diagnosis, and public policy.

Textbook of Disaster Psychiatry Oct 08 2021 This book presents a decade of advances in the psychological, biological and social responses to disasters, helping medics and leaders prepare and react.

***Risk Jun 23 2020* Recent events from the economic downturn to climate change mean that there has never been a better time to be thinking about and trying to better understand the concept of risk. In this book, prominent and eminent speakers from fields as diverse as statistics to classics, neuroscience to criminology, politics to astronomy, as well as speakers embedded in the media and in government, have put their ideas down on paper in a series of essays that broaden our understanding of the meaning of risk. The essays come from the prestigious Darwin College Lecture Series which, after twenty-five years, is one of the most popular public lecture series at the University of Cambridge. The risk lectures in 2010 were amongst the most popular yet and, in essay form, they make for a lively and engaging read for specialists and non-specialists alike.**

Privacy, Confidentiality, and Health Research Oct 20 2022 The potential of the e-health revolution, increased data sharing, database linking, biobanks and new techniques such as geolocation and genomics to advance human health is immense. For the full potential to be realized, though, privacy and confidentiality will have to be dealt with carefully.

Problematically, many conventional approaches to such pivotal matters as consent, identifiability, and safeguarding and security are inadequate. In many places, research is impeded by an overgrown thicket of laws, regulations, guidance and governance. The challenges are being heightened by the increasing use of biospecimens, and by the globalization of research in a world that has not globalized privacy protection. Drawing on examples from many developed countries and legal jurisdictions, the book critiques the issues, summarizes various ethics, policy, and legal positions (and revisions underway), describes innovative solutions, provides extensive references and suggests ways forward.

The Cambridge Textbook of Bioethics Jan 11 2022 Medicine and health care generate many bioethical problems and dilemmas that are of great academic, professional and public interest. This comprehensive resource is designed as a succinct yet authoritative text and reference for clinicians, bioethicists, and advanced students seeking a better understanding of ethics problems in the clinical setting. Each chapter illustrates an ethical problem that might be encountered in everyday practice; defines the concepts at issue; examines their implications from the perspectives of ethics, law and policy; and then provides a practical

resolution. There are 10 key sections presenting the most vital topics and clinically relevant areas of modern bioethics. International, interdisciplinary authorship and cross-cultural orientation ensure suitability for a worldwide audience. This book will assist all clinicians in making well-reasoned and defensible decisions by developing their awareness of ethical considerations and teaching the analytical skills to deal with them effectively.

Essential Epidemiology Jun 03 2021 An accessible, modern introduction to epidemiology for students of medicine and public health. It combines a strong public health perspective with modern methodological insights. It emphasises the fundamental principles common to all areas of epidemiology, and integrates public health and clinical epidemiology and the study of infectious and chronic diseases.

Risk and 'The Other' Jan 23 2023 From earthquakes to epidemics, AIDS to industrial accidents, the mass media continually bring into our daily lives the awareness of risk. But how do people respond to this increased awareness? How do people cope with living in what has been termed 'the risk society'? This book attempts to explain how, within a given social and cultural context, individuals make sense of impending crisis. In particular it tries to explain the phenomenon of a widespread sense of personal invulnerability when faced with risk: the 'not me' factor. Using a social psychological framework it highlights emotional factors which are a key component of responses to risk but have hitherto been neglected due to the tendency of much work on risk to concentrate almost exclusively on cognitive processing. This book will appeal to an international audience of post-graduates, academics and researchers in the areas of risk, psychology, sociology, medical anthropology and

psychoanalytic studies.

Risk Management in the Outdoors Aug 06 2021 Essential reading for students and practitioners involved in outdoor education, sport, recreation and tourism. Dickson, University of Canberra; Gray, University of Wollongong, Australia.

The Constitution of Risk Apr 01 2021 The Constitution of Risk is the first book to combine constitutional theory with the theory of risk regulation. The book argues that constitutional rulemaking is best understood as a means of managing political risks. Constitutional law structures and regulates the risks that arise in and from political life, such as an executive coup or military putsch, political abuse of ideological or ethnic minorities, or corrupt self-dealing by officials. The book claims that the best way to manage political risks is an approach it calls "optimizing constitutionalism" - in contrast to the worst-case thinking that underpins "precautionary constitutionalism," a mainstay of liberal constitutional theory. Drawing on a broad range of disciplines such as decision theory, game theory, welfare economics, political science, and psychology, this book advocates constitutional rulemaking undertaken in a spirit of welfare maximization, and offers a corrective to the pervasive and frequently irrational attitude of distrust of official power that is so prominent in American constitutional history and discourse.

Perioperative Care of the Elderly Sep 26 2020 This innovative, comprehensive book covers the key elements of perioperative management of older patients. The book's chapter structure coincides with the clinical path patients tread during their

treatment, from preoperative evaluation to post-hospital care. Epidemiological aspects and aging processes are illustrated, providing keys to understanding the quick expansion of geriatric surgery and defining the clinical profile of older surgical patients in a cybernetic perspective. Preoperative evaluation and preparation for surgery, including medication reconciliation and pre-habilitation, are developed in the light of supporting decision-making about surgery in an evidence-based and patient-focused way. Intra- and postoperative management are discussed, aiming to tailor anesthetic, surgical and nursing approaches to specific patients' needs, in order to prevent both general and age-related complications. This volume also addresses issues relevant to geriatric surgery, from different organizational models to clinical risk management and systems engineering applied to hospital organization.

Risk and Sociocultural Theory Oct 27 2020 This 1999 book presents a variety of exciting perspectives on the perception of risk and the strategies that people adopt to cope with it. Using the framework of recent social and cultural theory, it reflects the fact that risk has become integral to contemporary understandings of selfhood, the body and social relations, and is central to the work of writers such as Douglas, Beck, Giddens and the Foucauldian theorists. The contributors are all leading scholars in the fields of sociology, cultural and media studies and cultural anthropology. Combining empirical analyses with metatheoretical critiques, they tackle an unusually diverse range of topics including drug use, risk in the workplace, fear of crime and the media, risk and pregnant embodiment, the social construction of danger in childhood, anxieties about national identity, the governmental uses of risk and the relationship between risk phenomena and

social order.

Health Law Jul 17 2022 Drawing upon a range of disciplinary perspectives, Health Law: Frameworks and Context adopts a theoretically informed and principles-based approach to examining health law. Appealing to students and academic scholars alike, the text moves beyond traditional medical law frameworks to provide a broader contextual understanding of the way in which law intersects with health. A clear and accessible style of writing combined with a sophisticated and nuanced approach takes this rich and challenging field to a new level of analysis. Written by respected academics within the field, Health Law: Frameworks and Context is an essential text for scholars and students looking to grasp the fundamental concepts of this rapidly expanding area of law, as well as those who wish to deepen their knowledge and understanding of health law in Australia and internationally.

Tropospheric Ozone Jul 25 2020 This book presents updated and relevant information on the tropospheric ozone problem and its effects on the plants and human health. The contributions here present in-depth knowledge about history, pattern, sources, environmental factors and other necessary aspects of the tropospheric ozone problem. The book provides a balanced view of current developments on the effects of the tropospheric ozone on plant and human health, crop production and ecosystem services. In addition to the effects of the tropospheric ozone on growth and physiological and biochemical traits, it also considers the molecular basis of plant responses to ozone. The book encompasses a holistic view on various interconnected issues of ozone pollution, and will appeal to scientists from all over the world.

Saving Children from a Life of Crime : Early Risk Factors and Effective Interventions Nov 28 2020 After decades of rigorous

study in the United States and across the Western world, a great deal is known about the early risk factors for offending. High impulsiveness, low attainment, criminal parents, parental conflict, and growing up in a deprived, high-crime neighborhood are among the most important factors. There is also a growing body of high quality scientific evidence on the effectiveness of early prevention programs designed to prevent children from embarking on a life of crime. Drawing on the latest evidence, *Saving Children from a Life of Crime* is the first book to assess the early causes of offending and what works best to prevent it. Preschool intellectual enrichment, child skills training, parent management training, and home visiting programs are among the most effective early prevention programs. Criminologists David Farrington and Brandon Welsh also outline a policy strategy--early prevention--that uses this current research knowledge and brings into sharper focus what America's national crime fighting priority ought to be. At a time when unacceptable crime levels in America, rising criminal justice costs, and a punitive crime policy have spurred a growing interest in the early prevention of delinquency, Farrington and Welsh here lay the groundwork for change with a comprehensive national prevention strategy to save children from a life of crime.

Anesthesia for the High-Risk Patient Nov 01 2023 Reviews pre-, intra- and post-operative management of many of the most complicated and sick patients requiring anaesthesia for surgery.

Falls in Older People Nov 08 2021 Since the first edition of this very successful book was written to synthesise and review the enormous body of work covering falls in older people, there has been an even greater wealth of informative and promising studies designed to increase our

understanding of risk factors and prevention strategies. This second edition, first published in 2007, is written in three parts: epidemiology, strategies for prevention, and future research directions. New material includes recent studies covering: balance studies using tripping, slipping and stepping paradigms; sensitivity and depth perception visual risk factors; neurophysiological research on automatic or reflex balance activities; and the roles of syncope, vitamin D, cataract surgery, health and safety education, and exercise programs. This edition will be an invaluable update for clinicians, physiotherapists, occupational therapists, nurses, researchers, and all those working in community, hospital and residential or rehabilitation aged care settings.

Risk Communication Apr 25 2023 The procedure uses approaches from risk and decision analysis to identify the most relevant information; it also uses approaches from psychology and communication theory to ensure that its message is understood. This book is written in nontechnical terms, designed to make the approach feasible for anyone willing to try it. It is illustrated with successful communications, on a variety of topics."--Jacket.

***Children as 'Risk'* Sep 06 2021 Examines the social, legal and cultural challenges navigating the boundaries of 'normal'-'problematic'-'risky' sexual behaviours among peers.**

The Psychology of Risk Dec 10 2021 This second edition explores the psychology of risk, examining how individuals think, feel and act. The questions addressed include: why do companies fail to protect against obvious hazards? What biases in risk estimation are common? How should we communicate levels of risk effectively? How should we reduce risky behaviour?

Registries for Evaluating Patient Outcomes May 03 2021 This

User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Big Data, Health Law, and Bioethics Dec 22 2022 When data from all aspects of our lives can be relevant to our health - from our habits at the grocery store and our Google searches to our FitBit data and our medical records - can we really differentiate between big data and health big data? Will health big data be used for good, such as to improve drug safety, or ill, as in insurance discrimination? Will it disrupt health care (and the health care system) as we know it? Will it be possible to protect our health privacy? What barriers will there be to collecting and utilizing health big data? What role should law play, and what ethical concerns may arise? This timely, groundbreaking volume explores these questions and more from a variety of perspectives, examining how law promotes or discourages the use of big data in the health care sphere, and also what we can learn from other sectors.
