Brutified Jan 14 2022 *Brutified* is a collection of poetry written by the author Robert Benefiel. The poems contained within it are from a larger cache of poems written in 2019. The pieces themselves range from narrative to abstract, bibliographical to fictionalized, allowing for a fuller range of expression and voice. What each piece carries is the idea of surviving the brutality of the world, others, and even one's self, in hopes of gaining insight and retaining one's compassion. Whether the piece is addressing the idea of finding one's own art at a junk store, or stumbling across a love note written before, but after, a lover has left them, or even watching a young midget be chased through the mall, the author never ceases to try

and present the emotion and meaning at the core of each piece in a blatant yet subtle way.

Eternally North Dec 01 2020
Natasha Munro is your typical twenty eight year old girl, well your typical twenty eight year old English loud 'n' proud Geordie; curvy, fun and a whole load of fab-u-lous. Her life is all going to plan - good job, great friends, close family and a loving boyfriend - until an unexpected event stands everything on its head. Nursing a broken heart and decked head-to-toe in tasselled chaps and rhinestones, Natasha and her flamboyant fairy of a gay best friend, Tink, uproot from their North-Eastern nest, throw caution to the wind and

embark on a new life together in Canada. Canada - Land of the Rocky Mountains, maple syrup; oh, and an 'in-between movies' Hollywood mega-star. Enter infamous bad-boy of the big screen, Tudor North - Tudor 'bloody' North! Tudor is towering, brooding and gorgeous, and he is harbouring a deep secret. His outward demeanour is cold and intimidating, and with it he successfully keeps everyone at arm's length; that is everyone except a certain Ms. Munro. It soon becomes clear; what with her smart mouth and lusciously ample arse, that Natasha proves more than a match for our emotionally-distant mega-star. Will Natasha settle into her new life in Canada? Will she ever find her fairytale happy ending? Can a movie star and an ordinary girl from England ever really make it work? Or will the secrets lurking in Tudor's past scupper their chance of happiness? Eternally North is addictive, funny and heart-warming; a fast paced comedic journey of self-discovery;

unyielding friendship and, of course, it would not be complete without a generous sprinkling of good old-fashioned British 'slap-and-tickle'. **WARNING:** Contains a foul-mouthed voluptuous Brit; a self-confessed and self-promoted Friggin' Fantastic Fairy; and an abundance of tattoo-smothered muscles nicely wrapped up in one gorgeous bad-boy package. *The Acharnians* Oct 30 2020

History of Research on Tumor Angiogenesis May 18 2022 In 1971, J. Folkman published in the "New England Journal of Medicine" a hypothesis that tumor growth is angiogenesis-dependent. Folkman introduced the concept that tumors probably secrete diffusible molecules that could stimulate the growth of new blood vessels toward the tumor and that the resulting tumor neovascularization could conceivably be prevented or interrupted by angiogenesis inhibitors. Solid and haematological tumors consist

of an avascular and a subsequent vascular phase. Assuming that this depends on the release of angiogenic factors, acquisition of angiogenic capability can be seen as an expression of progression from neoplastic transformation to tumor growth and metastasis. Beginning in the 1980's, the biopharmaceutical industry began exploiting the field of antiangiogenesis for creating new therapeutic compounds for modulating new blood vessels in tumor growth. In 2004, Avastin (Bevacizumab), a humanized anti-VEGF monoclonal antibody, was the first angiogenesis inhibitor approved by the Food and Drug Administration for the treatment of colorectal cancer. At present, it has been estimated that over 20,000 cancer patients worldwide have received experimental form of antiangiogenic therapy. This book offers a historical account of the relevant literature. It also emphasizes the crucial and paradigmatic role of angiogenesis as a

biological process and the significance of antiangiogenic approach for the treatment of tumors.

Fletcherism, What It Is Nov 11 2021 Horace Fletcher, an American health-food advocate of the Victorian era, taught that, in order to prevent overeating and insure dental health, foods should be chewed until liquid. In this 1913 volume, Fletcher articulates and supports, through the evidence of his own strength, his popular theories of health and well-being.

Superheresies May 06 2021 Three stories starring Golden Age heroes and featuring existential themes.

Angiogenesis Jun 18 2022 Dr. Judah Folkman is considered the "father of angiogenesis." Because of Folkman's discovery and research, the possibilities of angiogenic therapy have broadened beyond cancer to many noncancerous diseases. *Angiogenesis: An Integrative Approach from Science to Medicine* is a comprehensive, concise summary of tumor

angiogenesis. It is an up-to-date and authoritative reference for the angiogenesis field as it relates to oncology. This book represents the first collection in a volume of which Folkman is co-editor. Folkman has authored nearly 400 original papers and more than 100 book chapters.

Bergsonism Jun 26 2020 In this analysis of one major philosopher by another, Gilles Deleuze identifies three pivotal concepts - duration, memory, and *lan vital* - that are found throughout Bergson's writings and shows the relevance of Bergson's work to contemporary philosophical debates. He interprets and integrates these themes into a single philosophical program, arguing that Bergson's philosophical intentions are methodological. They are more than a polemic against the limitations of science and common sense, particularly in Bergson's elaboration of the explanatory powers of the notion of duration - thinking in terms of time rather than space.

The Book of Dave Feb 12 2022
The Book of Dave is Booker-shortlisted author Will Self's dazzling sixth novel. What if a demented London cabbie called Dave Rudman wrote a book to his estranged son to give him some fatherly advice? What if that book was buried in Hampstead and hundreds of years later, when rising sea levels have put London underwater, spawned a religion? What if one man decided to question life according to Dave? And what if Dave had indeed made a mistake? Shuttling between the recent past and a far-off future where England is terribly altered, *The Book of Dave* is a strange and troubling mirror held up to our times: disturbing, satirizing and vilifying who and what we think we are. At once a meditation upon the nature of received religion, a love story, a caustic satire of contemporary urban life and a historical detective story set in the far future - this compulsive novel will be enjoyed by readers everywhere, including

fans of Martin Amis and Anthony Burgess's *A Clockwork Orange*. 'Vivid, visceral and breathtakingly ambitious, this is Self's best yet' *GQ* 'Mindboggling ... darkly hilarious ... A fascinating book' *Evening Standard* Will Self is the author of nine novels including *Cock and Bull*; *My Idea of Fun*; *Great Apes*; *How the Dead Live*; *Dorian*, an *Imitation*; *The Book of Dave*; *The Butt*; *Walking to Hollywood and Umbrella*, which was shortlisted for the Man Booker Prize. He has written five collections of shorter fiction and three novellas: *The Quantity Theory of Insanity*; *Grey Area*; *License to Hug*; *The Sweet Smell of Psychosis*; *Design Faults in the Volvo 760 Turbo*; *Tough, Tough Toys for Tough, Tough Boys*; *Dr. Mukti and Other Tales of Woe and Liver: A Fictional Organ with a Surface Anatomy of Four Lobes*. Self has also compiled a number of nonfiction works, including *The Undivided Self: Selected Stories*; *Junk Mail*; *Perfidious Man*; *Sore Sites*; *Feeding*

Frenzy; *Psycho*; *Psychogeography*; *Psycho Too* and *The Unbearable Lightness of Being a Prawn Cracker*.

[Face-gear Drives: Design, Analysis, and Testing for Helicopter Transmission Applications](#) Mar 28 2023

The use of face-gears in helicopter transmissions was explored. A light-weight, split-torque transmission design utilizing face-gears is described. Face-gear design and geometry were investigated. Topics included tooth generation, limiting inner and outer radii, tooth contact analysis, contact ratio, gear eccentricity, grinding, and structural stiffness. Design charts were developed to determine minimum and maximum face-gear inner and outer radii. An analytical study showed that the face-gear drive is relatively insensitive to gear misalignment with respect to transmission errors, but the tooth contact is affected by misalignment. A method of localizing the bearing contact to permit operation with

misalignment was explored. Two new methods for grinding of the face-gear tooth surfaces were also investigated. The proper choice of shaft stiffness enabled good load sharing in the split-torque transmission design. Face-gear experimental studies were also conducted. These tests demonstrated the feasibility of face-gears in high-speed, high-load applications such as helicopter transmissions ... Transmissions (Machine Elements), Gears, Design, Helicopters.

ABC Mar 16 2022 ABC's, First Words, Numbers and Shapes, Colors and Opposites including a special note to parents. Children will enjoy hours of learning fun in each 32-page bi-lingual book. All four books are designed specifically to teach and reinforce basic concepts for preschool through early elementary school children.

Dolls' House Do It Yourself

Oct 03 2023 An essential step-by-step guide to making over 35 toys and games for the 1/12th scale dolls' house.

Projects include: building blocks and mini houses, kites, abacus, xylophone, Jack-in-the-box and more! Templates and diagrams for each piece are also included.--Summary from Amazon.com.

The Consolation of Philosophy (translated by H. R. James M.A.)

Sep 29 2020

Consolation of Philosophy

(Latin: Consolatio

Philosophiae) is a philosophical

work by Boethius, written

around the year 524. It has

been described as the single

most important and influential

work in the West on Medieval

and early Renaissance

Christianity, and is also the last

great Western work of the

Classical Period. Anicius

Manlius Severinus Boëthius,

commonly called Boethius (c.

480–524 or 525 AD), was a

philosopher of the early 6th

century. He was born in Rome

to an ancient and prominent

family which included

emperors Petronius Maximus

and Olybrius and many

consuls. His father, Flavius

Manlius Boethius, was consul

in 487 after Odoacer deposed

the last Western Roman Emperor. Boethius, of the noble Anicia family, entered public life at a young age and was already a senator by the age of 25. Boethius himself was consul in 510 in the kingdom of the Ostrogoths. In 522 he saw his two sons become consuls. Boethius was imprisoned and eventually executed by King Theodoric the Great, who suspected him of conspiring with the Eastern Roman Empire. While jailed, Boethius composed his *Consolation of Philosophy*, a philosophical treatise on fortune, death, and other issues. The *Consolation* became one of the most popular and influential works of the Middle Ages.

Introduction to Programming in Python Dec 25 2022 Today, anyone in a scientific or technical discipline needs programming skills. Python is an ideal first programming language, and *Introduction to Programming in Python* is the best guide to learning it.

Princeton University's Robert Sedgewick, Kevin Wayne, and

Robert Dondero have crafted an accessible, interdisciplinary introduction to programming in Python that emphasizes important and engaging applications, not toy problems. The authors supply the tools needed for students to learn that programming is a natural, satisfying, and creative experience. This example-driven guide focuses on Python's most useful features and brings programming to life for every student in the sciences, engineering, and computer science. Coverage includes Basic elements of programming: variables, assignment statements, built-in data types, conditionals, loops, arrays, and I/O, including graphics and sound Functions, modules, and libraries: organizing programs into components that can be independently debugged, maintained, and reused Object-oriented programming and data abstraction: objects, modularity, encapsulation, and more Algorithms and data structures: sort/search algorithms, stacks, queues, and

symbol tables Examples from applied math, physics, chemistry, biology, and computer science—all compatible with Python 2 and 3 Drawing on their extensive classroom experience, the authors provide Q&As, exercises, and opportunities for creative practice throughout. An extensive amount of supplementary information is available at introcs.cs.princeton.edu/python. With source code, I/O libraries, solutions to selected exercises, and much more, this companion website empowers people to use their own computers to teach and learn the material.

Gentlehands Jan 31 2021
Sixteen-year-old Buddy Boyle makes a shattering discovery about his family in this powerful and poignant novel by award-winning author M. E. Kerr Buddy Boyle lives with his parents and younger brother in a small house on a half-acre of

land in undesirable Seaville, New York. Skye Pennington spends her summers on the opposite end of town on five acres with a view of the ocean. Buddy's dad is a police sergeant; Skye's is the head of a multi-million-dollar industry. But none of that stops Buddy and Skye from falling in love. To impress her, Buddy takes Skye to visit his aristocratic grandfather in Montauk. Frank Trenker is Buddy's mother's father, a man she never talks about. Just as Buddy feels he's getting to know his estranged grandfather, reporter Nicholas De Lucca shows up. For three years, he's been searching for a notorious Nazi war criminal known as Gentlehands. When De Lucca uncovers a shocking connection to Buddy's grandfather, Buddy refuses to believe the accusations. One of M. E. Kerr's very best novels, *Gentlehands* tells a spellbinding story of love, loyalty, and the family you thought you knew. This ebook features an illustrated personal history of M. E. Kerr including rare images from the author's

collection.

Tumor Vascularization Jun 06 2021 Tumor Vascularization discusses the different types of growth of tumor blood vessels and their implications on research and healthcare. The book is divided into three parts: the first one, General Mechanisms, discusses different vessel growth mechanisms, such as sprouting angiogenesis, non-angiogenesis dependent growth, intussusceptive microvascular growth, vascular co-option and vasculogenic mimicry. The second and third parts, entitled Clinical Implications and Therapeutic Implications are dedicated to translating recent findings in this field to patient treatment and healthcare. This book is a valuable source for cancer researchers, oncologists, graduate students and members of the biomedical field who are interested in tumor progression and blood vessels. Explains new, non-orthodox concepts recently developed and related to the modality of growth of tumor blood vessels Provides

information on the types of angiogenesis, non-angiogenesis dependent growth and vascular co-option, discussing both their similarities and differences Encompasses a discussion on clinical implications of tumor vascularization to translate research findings into treatment

Photochemistry and Photophysics of

Coordination Compounds II

Aug 01 2023 Photochemistry (a term that broadly speaking includes photophysics) is a branch of modern science that deals with the interaction of light with matter and lies at the crossroads of chemistry, physics, and biology. However, before being a branch of modern science, photochemistry was (and still is today), an extremely important natural phenomenon. When

God said: "Let there be light", photochemistry began to operate, helping God to create the world as we now know it. It is likely that photochemistry was the spark for the origin of life on Earth and played a fundamental role in the evolution of life. Through the photosynthetic process that takes place in green plants, photochemistry is responsible for the maintenance of all living organisms. In the geological past photochemistry caused the accumulation of the deposits of coal, oil, and natural gas that we now use as fuels. Photochemistry is involved in the control of ozone in the stratosphere and in a great number of environmental processes that occur in the atmosphere, in the sea, and on the soil. Photochemistry is the essence of the process of vision and causes a variety of behavioral responses in living organisms. Photochemistry as a science is quite young; we only need to go back less than one century to find its early pioneer [1]. The concept of coordination

compound is also relatively young; it was established in 1892, when Alfred Werner conceived his theory of metal complexes [2]. Since then, the terms coordination compound and metal complex have been used as synonyms, even if in the last 30 years, coordination chemistry has extended its scope to the binding of all kinds of substrates [3, 4].

Wagon, Chariot and Carriage
May 30 2023 This book presents the technological and social history of early land transport -- horses, wagons, chariots and wheeled conveyances of all kinds -- including the history of vehicles and mounts as symbols of status and eminence, fit to be presented to potentates, or buried with them. The author assembles evidence from texts and archaeology in the form of a grand chronological narrative that touches on matters as diverse as the fodder of King Solomon's horses, the military significance of the cavalry stirrup and the role of women on horseback. It begins with

the ox-wagon: humble enough to us but, over 4000 years ago, the very first luxury transport. During the second millennium BC it was supplanted -- in lands as far apart as Egypt, India and China -- by the horse-drawn chariot, not merely as an engine of war, but as a parade car for public display and hunting in royal parks. Yet the chariot itself was gradually displaced by the ridden horse, which became the cardinal attribute of monarchy and nobility. The image of the heroic ruler on horseback remained constant from Marcus Aurelius until the eve of the modern era, by which time the covered carriage and coach had long since assumed the mantle of prestige vehicles. Traders and Raiders on China's Northern Frontier Aug 21 2022 An important, original study of the (previously denied) cultural contribution of the barbarians to China, and of the trade northward. Focuses on the Han period. The artifacts, abundantly and well- illustrated (200 illus., 40 in color), document the goods and

support the argument.

The Last Mermaid Sep 09 2021

Shana Abé has entranced countless readers with her passion-filled novels of adventure, intrigue, and romance. Now the author of The Secret Swan delivers a gift from the sea: three hauntingly beautiful tales connected by a legend, a locket, and a love beyond time. 531 a.d.: The tiny island of Kell is said to be enchanted, inhabited by an extraordinary creature who comforts shipwrecked sailors passing into the next world. Prince Aedan of the Isles believes in no such nonsense—until he awakens on Kell itself and meets the sensuous siren who rescued him from the sea. 1721: Ronan MacMhuirich, Earl of Kell, is the target of an unlikely assassin: Leila, a mysterious woman from an exotic land. But his irresistibly beautiful would-be slayer is in just as much danger as Ronan when she falls for this man with a magic of his own. 2004: What do you do when you inherit a

Scottish island you never knew existed—and find yourself pursued by a handsome stranger who wants to buy it from you? That’s what happens to Ruri Kell when she accepts Iain MacInnes’s invitation to visit her birthright, and listens to a proposition as sinfully tempting as everything else about him. Three seductive love stories, three passionate couples, all linked by one of the most romantic myths of all.

Great Northern Atlantics Nov 04 2023 The Great Northern Atlantics, were the first locomotives constructed in Britain to the 4-4-2 wheel arrangement. The Atlantics were designed by H.G. Ivatt, locomotive Superintendent of The Great Northern Railway. Introduced from 1898, with the construction at Doncaster Works of small boilered Atlantic number 990 Henry Oakley, which is now preserved in the National Collection at York, this type of locomotive became one of the most successful types in use on top link express work in the

late Victorian and Edwardian era. The small boilered type was followed in 1902, by the large boilered type, examples of which remained in traffic until the early 1950s. The two types of Great Northern Atlantic locomotives were retained in top link service on the L N E R well into the 1920s, as there were not enough of the new Gresley A1 Pacific's to take over top link diagrams. As a result of the success of the Ivatt designed large boilered Atlantic, D. Earl-Marsh, who was in charge of the drawing office at Doncaster, designed his own version of the Ivatt machine, when he moved to Brighton Works as Locomotive Superintendent of the L B S C R. The Great Northern Atlantics, like the Brighton machines had a large following which has continued to this day, with model engineers and small scale modellers continuing to construct fine live steam and electric drive models of these handsome locomotives.

Cranial Computerized Tomography Oct 11 2021 Only a few years following its original development by the English physicist G.N. HOUNSFIELD, cranial computerized tomography has proved to be of revolutionary importance for the diagnosis of brain disorders. This is reflected not least by the almost immediate and worldwide acceptance of this diagnostic method. Meanwhile, computerized tomography has in addition led to a considerably improved diagnosis of lesions within the orbital region. With the technically advanced systems of the second generation that will soon be available, the method can also be applied to the study of pathological processes of the facial region of the skull and the neck as well. Finally, although at present still at the stage of clinical investigation, the whole-body scanning system will enable investigation of all parts of the body. Stimulated by the successful 1st and 2nd International Symposium on

Computerized Tomography held in Hamilton, Bermuda, in ~'arch 1975 and in San Juan, Puerto Rico, in April 1976, we organized a meeting on cranial computerized tomography which took place in ~unich, June 10 to 12, 1976. It was the aim of this symposium to provide basic information as well as to exchange the experiences with the new method.

A Brief History of Blood and Lymphatic Vessels Oct 23 2022 This book provides a comprehensive account of vascular biology and pathology and its significance for health and disease. It systematically and chronologically explains how we came to our current understanding of the vasculature and its function today, and describes in an entertaining way the diverse flaws and turns in science and medicine from the past. It thereby offers a complete and well-studied history on vascular biology and medicine. The book has an easy-to-read style and is written for students as well as scientists, physicians and

lecturers in the field of
biomedicine, human
physiology, cardiology and
hematology.

[A Mind of Its Own](#) Aug 28 2020

Whether enemy or ally, demon
or god, the source of
satisfaction or the root of all
earthly troubles, the penis has
forced humanity to wrestle
with its enduring mysteries.
Here, in an enlightening and
entertaining cultural study, is a
book that gives context to the
central role of the penis in
Western civilization. A man can
hold his manhood in his hand,
but who is really gripping
whom? Is the penis the best in
man -- or the beast? How is
man supposed to use it? And
when does that use become
abuse? Of all the bodily organs,

only the penis forces man to
confront such contradictions:
something insistent yet
reluctant, a tool that creates
but also destroys, a part of the
body that often seems apart
from the body. This is the
conundrum that makes the
penis both hero and villain in a
drama that shapes every man --
and mankind along with it. In *A
Mind of Its Own*, David M.
Friedman shows that the penis
is more than a body part. It is
an idea, a conceptual but flesh-
and-blood measuring stick of
man's place in the world. That
men have a penis is a scientific
fact; how they think about it,
feel about it, and use it is not.
It is possible to identify the key
moments in Western history
when a new idea of the penis
addressed the larger mystery
of man's relationship with it
and changed forever the way
that organ was conceived of
and put to use. *A Mind of Its
Own* brilliantly distills this
complex and largely
unexamined story. Deified by
the pagan cultures of the
ancient world and demonized
by the early Roman church, the

organ was later secularized by pioneering anatomists such as Leonardo da Vinci. After being measured "scientifically" in an effort to subjugate some races while elevating others, the organ was psychoanalyzed by Sigmund Freud. As a result, the penis assumed a paradigmatic role in psychology -- whether the patient was equipped with the organ or envied those who were. Now, after being politicized by feminism and exploited in countless ways by pop culture, the penis has been medicalized. As no one has before him, Friedman shows

how the arrival of erection industry products such as Viagra is more than a health or business story. It is the latest -- and perhaps final -- chapter in one of the longest sagas in human history: the story of man's relationship with his penis. *A Mind of Its Own* charts the vicissitudes of that relationship through its often amusing, occasionally alarming, and never boring course. With intellectual rigor and a healthy dose of wry humor, David M. Friedman serves up one of the most thought-provoking, significant, and readable cultural works in years.
