Analyses of Interdependencies. An academic and policy debate has been running in recent decades on whether and to what extent travel behaviour is influenced by the built environment. This dissertation addresses the influence on daily travel distance, chaining behaviour, car ownership The author of the bestselling The Art of Innovation reveals the strategies IDEO, the world-famous design firm, uses to foster innovative thinking throughout an organization and overcome the naysayers who stifle creativity. The role of the devil's advocate is nearly universal in business today. It allows individuals to step outside themselves and raise questions and concerns that effectively kill new projects and ideas, while claiming no personal responsibility. Nothing is more potent in stifling innovation. Over the years, IDEO has developed ten roles people can play in an organization to foster innovation and new ideas while offering an effective counter to naysayers. Among these approaches are the Anthropologist—the person who goes into the field to see how customers use and respond to products, to come up with new innovations; the Cross-pollinator who mixes and matches ideas, people, and technology to create new ideas that can drive growth; and the Hurdler, who instantly looks for ways to overcome the limits and challenges to any situation. Filled with engaging stories of how Kraft, Procter and Gamble, Safeway and the Mayo Clinic have incorporated IDEO's thinking to transform the customer experience, The Ten Faces of Innovation is an extraordinary guide to nurturing and sustaining a culture of continuous innovation and renewal. Naomi Leite paints a poignant and graceful portrait of Portugal's urban Marranos, who trace their ancestry to fifteenth-century Jews forcibly converted to Catholicism and now seek connection with the Jewish people at large. Their story raises questions fundamental to the human condition: how people come to identify with far-flung others; how some find glimmerings of mystical connection in a world said to be disenchanted; how identities are lived in practice and challenged in interaction; how the horizons of kinship expand in a globally interconnected era; and how feelings of relatedness emerge between strangers and gather strength over time. Focusing on mutual imaginings and face-to-face encounters between urban Marranos and the foreign Jewish tourists and outreach workers who travel to meet them, Leite draws on a decade of ethnographic research in Portugal to trace participants' perceptions of self, peoplehood, and belonging as they evolve through local and global social spaces. The 31 individual authored papers from the breakout sessions are contained in Volume 2"--Pub. desc. Global Tourist Behavior contains travel and marketing research that explores the integral global nature of tourism. The globalization of tourism has resulted in more culturally diverse travelers with different preferences, motivations, expectations, and needs, while at the same time worldwide movements toward democracy have made some locations more accessible than ever before. appropriate marketing and management strategies for specific destinations. Visit Earth! The exciting birthplace of man! Now, courtesy of Starways, Inc., you can take your vacation anywhere . . . literally anywhere. Starting from the holiday planet of Paradiso, eager tourists can travel to Mars, Venus, or more exotic planets scattered across the stars. But curiously, there's one trip that Starways seems to discourage people from taking. And naturally that's the one Ram Burrell is most interested in: a trip to Earth. Once Burrell finagles a ticket for the journey, he discovers why Earth is the least-visited planet in the galaxy . . . and why Starways aims to keep it that way. Transportation engineering and transportation planning are two sides of the same coin aiming at the design of an efficient infrastructure and service to meet the growing needs for accessibility and mobility. Many well-designed transport systems that meet these needs are based on a solid understanding of human behavior. Since transportation systems are the backbone connecting the vital parts of a city, in-depth understanding of human nature is essential to the planning, design, and operational analysis of transportation systems. With contributions by transportation experts from around the world, *Transportation Systems Planning: Methods and Applications* compiles engineering data and methods for solving problems in the planning, design, construction, and operation of various transportation modes into one source. It is the first methodological transportation planning reference that illustrates analytical simulation methods that depict human behavior in a realistic way, and many of its chapters emphasize newly developed and previously unpublished simulation methods. The handbook demonstrates how urban and regional planning, geography, demography, economics, sociology, ecology, psychology, business, operations management, and engineering come together to help us plan for better futures that are human-centered. The text reviews projects from an initial problem statement to final policy action and associated decision-making and examines policies at all levels of government, from the city to the national levels. Unlike many other handbooks which are encyclopedic reviews, *Transportation Systems Planning* extends far beyond modeling in engineering and economics to present a truly transdisciplinary approach to transportation systems planning. Racing cyclists all ride the same frail machine and all are equal before the demands of the road. But what is it that makes a winner? What special attributes do winners need to give them that extra edge? To find out, Fife analyses and illustrates the moral strength, intelligence, racing nous, cunning, tactical acumen and superior mental resilience of the champion racing cyclist. Drawing on exclusive interviews and personal acquaintance with some of the best riders to have raced on the continent, as well as mechanics and team-support crew, Inside the Peloton is a vivid portrait of the complex character of cycle racing. It is an unparalleled, in-depth study of ambition, the rage to win, the capacity to recover from defeat, the harrowing misery of lost morale and the hard initiation faced by every newcomer - however talented - to the unforgiving demands of professional competition. Provocative and rich in insight, this book is a very personal account by Fife. Read it to discover: What made Merckx, apparently invincible, so prey to doubt? --What rendered the massively talented Poulidor so beatable? --Why did Sean Yates, with a cardiovascular and lung capacity equal to that of Merckx, ride so contentedly as a domestique? The 31 individual authored papers from the breakout sessions are contained in Volume 2"--Pub. desc. Each chapter in *Equilibrium and Advanced Transportation Modelling* develops a topic from basic concepts to the state-of-the-art, and beyond. All chapters relate to aspects of network equilibrium. Chapter One advocates the use of simulation models for the representation of traffic flow movements at the microscopic level. Chapter Two presents travel demand systems for generating trip matrices from activity-based models, taking into account the entire daily schedule of network users. Chapter Three examines equilibrium strategic choices adopted by the passengers of a congested transit system, carefully addressing line selection at boarding and transfer nodes. Chapter Four provides a critical appraisal of the traditional process that consists in sequentially performing the tasks of trip generation, trip distribution, mode split and assignment, and its impact on the practice of transportation planning. Chapter Five gives an insightful overview of stochastic assignment models, both in the static and dynamic cases. Chapters Six and Seven investigate the setting of tolls to improve traffic flow conditions in a congested transportation network. Chapter Eight provides a unifying framework for the analysis of multicriteria assignment models. In this chapter, available algorithms are summarized and an econometric perspective on the estimation of heterogeneous preferences is given. Chapter Nine surveys the use of hyperpaths in operations research and proposes a new paradigm of equilibrium in a capacitated network, with an application to transit assignment. Chapter Ten analyzes the transient states of a system moving towards equilibrium, using the mathematical framework of projected dynamical systems. Chapter Eleven discusses an in-depth survey of algorithms for solving shortest path problems, which are pervasive to any equilibrium algorithm. The chapter devotes special attention to the computation of dynamic shortest paths and to shortest hyperpaths. The final chapter considers operations research tools for reducing traffic congestion, in particular introducing an algorithm for solving a signal-setting problem formulated as a bilevel program. Increasing customer needs, the globalization of markets and the evolution of e-commerce add to the complexity of logistic processes. In today's business, it is well understood that an effective management of logistic processes is impossible without the use of computer-based tools and quantitative methods. This book presents in a systematic way quantitative approaches to distribution logistics and supply chain management. The main orientation of the book is towards practical problem solving, and numerous

case studies and practical applications are presented. The topics covered include: supply chain management, reverse logistics, e-commerce, facility location and network planning, vehicle routing, warehousing, inventory control. With no concrete plan, and a little naive, Lisa is traveling to New York. Ostensibly, she just wants to improve her English. But, having reached a turning point in her career, she is secretly longing for a time-out. For nine and a half weeks she will conquer "her city", mostly on foot. Between shopping, culture, and celebrity hunting she will find tons of clichés and experiences, but also some surprises. And, on her way to the various sightseeing spots she will find the opportunity for contemplating her life and her approach towards it. The appeal of the uncertain and the freedom to do whatever she is in the mood for eventually lead to a liberating motto: "Just be yourself!"
