Education in Brazil has changed intensely over the last several years. Access to basic education is nearly universal, secondary education has been expanding very rapidly, and so too has higher education at both the undergraduate and graduate levels. However, serious issues remain related to quality, equity and inappropriate use of resources. Some of these problems are related to the fact that Brazil started to develop its education institutions very late, and did not build strong teaching and academic professions that could provide the necessary support for education policies committed to equity, quality and efficiency. This book, written by leading experts, is the first English-language text to provide a comprehensive analysis of the challenges facing Brazilian education at all levels, including issues such as the quality of basic education, the establishment of standards for higher education, the experiences of technical and vocational schools, teacher education, regulation and financing of public and private higher education, and the growing role of graduate education and research. Discusses work orientation programmes at the basic education level, policy issues relating to work orientation in schools, and the planning and implementation of work orientation programmes. Insufficient resources and inadequate public expenditure management often prevent governments in low-income countries from providing quality basic education free of charge. User payments by parents are an alternative means of financing basic education. This paper assesses how user payments affect educational opportunities and quality of education for children of poor families in low-income countries. Conditions are identified under which user payments can or cannot improve educational outcomes. User payments, whether taking the form of compulsory benefit taxation or voluntary user fees, are a temporary solution and second-best compared with free-access, publicly financed quality education that is consistent with macroeconomic stability. Studies of the retention of literacy and numeracy by adults who have only obtained primary schooling have given little encouragement to the belief that the cognitive effects of schooling are enduring for many school leavers. How these findings can be reconciled with the claims made for the importance of schooling as an instrument of social and economic change is the subject of investigation in this volume. The cognitive outcomes of literacy acquisition and secular schools in coastal Kenya are the focus of this ethnographic study, which stresses the relevance of an international understanding of the particular problems and dilemmas that face the educational systems of individual countries. Maringe ought to be commended for putting together an invaluable contribution to our understanding of research into a complex education system in South Africa. This volume provides a useful foundation to the current state of education quality in South Africa including the impact of interventions. It also brings to the fore challenges still facing education transformation. The evidence presented which, taken together, lays out a coherent view of how improvements could be made. Albert Chanee Head of Planning, Gauteng Department of Education For too long the weight of educational scholarship produced in South Africa has been limited to that simple and standard form called the literature review. Now, for the first time, education researchers are provided with an African-based text on the concepts and methods of conducting systematic reviews. In this exceptional work of editorship, Felix Maringe brings together some of the leading researchers on South African education to model and demonstrate how to review a significant body of research on a chosen topic which is adjudicated strictly on the basis of the quality and efficacy of the evidence in hand. I have no doubt that this remarkable book will become a standard reference for educational researchers in and beyond the African continent. It will also lift the quality of educational inquiry by equipping a new generation of scholars with the capacity for doing evidence-based research that compels the attention of policymakers, planners and practitioners alike. Prof Jonathan Jansen Stellenbosch University An invaluable guide to the pre-GED qualification test Covering the highest level tested by the Test of Adult Basic Education--readers with skill levels of grades 9-12--TABE offers comprehensive, direct instruction; test previews; and study skills material designed to be easily accessible by adult learners outside the classroom setting. Developed to help adults realize both learning and career goals, this book contains: Helpful charts and tables Practice exercises Pretests, posttests, and skills analysis charts Reading passages taken from real-life experiences And much more Voucher programs consist of three simultaneous reforms: (1) allowing parents to choose schools, (2) creating intense incentives for schools to increase enrollment, and (3) granting schools management autonomy to respond to demand. As a result, voucher advocates and critics tend to talk past each other. A principal-agent framework clarifies the argument for education vouchers. Central findings from the literature, including issues related to variance in the performance measure, risk aversion, the productivity of more effort, multiple tasks, and the value of monitoring are found relevant for an analysis of vouchers. An assessment of findings on voucher programs in industrial countries, as well as a review of voucher or quasi-voucher experiences in Bangladesh, Chile, Colombia, Côte d'Ivoire, and the Czech Republic support the usefulness of the analytic framework. Gauri and Vawda conclude that vouchers for basic education in developing countries can enhance outcomes when they are limited to modest numbers of poor students in urban settings, particularly in conjunction with existing private schools with surplus capacity. The success of more ambitious voucher programs depends on an institutional infrastructure challenging to industrial and developing countries alike. All over the world, economic inclusion has risen to the top of the development discourse. A well-performing education system is central to achieving inclusive development - but the challenge of improving educational outcomes has proven to be unexpectedly difficult. Access to education has increased, but quality remains low, with weaknesses in governance comprising an important part of the explanation. The Politics and Governance of Basic Education explores the balance between hierarchical and horizontal institutional arrangements for the public provision of basic education. Using the vivid example of South Africa, a country that had ambitious goals at the outset of its transition from apartheid to democracy, it explores how the interaction of politics and institutions affects educational outcomes. By examining lessons learned from how South Africa failed to achieve many of its goals, it constructs an innovative alternative strategy for making process, combining practical steps to achieve incremental gains to re-orient the system towards learning. Master's Thesis from the year 2010 in the subject Pedagogy - The Teacher, Educational Leadership, grade: A, University of Cape Coast (Institute of Educational Planning and Administration), course: Educational Planning, language: English, abstract: The purpose of the study was to determine the internal efficiency of basic education in the Wa Municipality of the Upper West Region. The objectives of the study were to find: the enrolment ratio and growth rate, the repetition and dropout rate, the pupil-teacher ratio as compared to the national norm, as well as to determine the completion rate of pupils in public basic schools in the Wa Municipality. The apparent cohort method was used to determine the internal efficiency of basic education in the Wa municipality based on the foregoing indicators of internal efficiency. A simple random sampling technique was used to select 18 primary schools and 18 junior high schools giving a sample size of 36. Questionnaires were used to collect the data after pilot testing to establish Cronbach's Alpha Co-efficient of reliability which was 97. Data were collected from such school records as enrolment, dropout, promotion, transfers and death records. The data collection instrument was questionnaires. It was found that repetition and drop-out rates were generally low in the Municipality. Additionally, the completion rate was also low which requires further investigation. The researcher recommends that parents, teachers and Educational Authorities should collaborate to increase the enrolment of the girl-child to the level of boys by improving on the teaching learning conditions in order to increase the completion rate to at least 60%.
