Based on over fifteen years of groundbreaking research, Developing Creative Thinking Skills helps learners demonstrably increase their own creative thinking skills. Focusing on divergent thinking, twelve inventive chapters build one's capacity to generate a wide range of ideas, both as an individual and as a collaborator. This innovative textbook outlines a semester-long structure for the development of creative thinking skills and can easily be utilized as a self-directed format for those learning outside of a classroom. Readers are stimulated to maximize their own creativity through active exercises, challenges to personal limits and assumptions, and ideas that can help create powerful habits of variance. Over the course of twenty years and across three editions, this text has approached case management as both an art and a science by providing students and practitioners with the basics of case management theory, skills, and applications. This fourth edition, which focuses on both the social work and nursing professions, offers trainers, instructors, and students detailed information about how case management is delivered, major issues encountered in practice, how services are affected by different populations, and the unique skills that are required by case managers in order to be effective. Chapter exercises and numerous case examples help readers practice some of the skills associated with the content offered. Case Management is unique in that it brings together the major professions that conduct case management in the United States. It is focused on skill learning more than on theory, and discusses not only the importance of case management in the current social work and medical milieu, but also the challenges that case managers face in helping clients. In addition, the text offers a model for integrated case management between professions and in numerous settings, including nursing centers, community mental health facilities, and criminal justice centers.
