Macroeconomics, Global Edition May 29 2023 For intermediate courses in economics. In Macroeconomics, Blanchard presents an integrated, global view of macroeconomics, enabling students to see the connections between goods markets, financial markets, and labor markets worldwide. A unified view of the latest macroeconomic events In Macroeconomics, Blanchard presents an integrated, global view of macroeconomics, enabling students to see the connections between goods markets, financial markets, and labor markets worldwide. Organized into two parts, the text contains a core section that focuses on short-, medium-, and long-run markets and two major extensions that offer more in-depth coverage of the issues at hand. From the major economic crisis that engulfed the world in the late 2000s, to monetary policy in the US, to the problems of the Euro area, and growth in China, the text helps students make sense not only of current macroeconomic events but also of those that may unfold in the future. Integrated, detailed boxes in the 8th Edition have been updated to convey the life of macroeconomics today, reinforce lessons from the models, and help students employ and develop their analytical and evaluative skills.

Social Media ROI Apr 27 2023 Use Social and Viral Technologies to Supercharge Your Customer Service! Use this book to bring true business discipline to your social media program and align with your organization's goals. Top branding and marketing expert Olivier Blanchard brings together new best practices for strategy, planning, execution, measurement, analysis, and optimization. You will learn how to define the financial and nonfinancial business impacts you are aiming for-- and achieve them. Social Media ROI delivers practical solutions for everything from structuring programs to attracting followers, defining metrics to managing crises. Whether you are in a startup or a global enterprise, this book will help you gain more value from every dime you invest in social media. You'll learn how to: Align social communications with broader business goals and functions Plan for effective performance measurement Establish clarity of vision, purpose, and execution Implement guidelines and operations for effectively managing social media Get started by "listening before talking" Integrate social media into long-term marketing programs, short-term campaigns, and brand initiatives Use social media to deliver real-time, optimized customer support Leverage mobility and the "on-the-fly" social media culture Measure FRY (Frequency, Reach, and Yield) Includes a foreword by Brian Solis.

Lectures on Macroeconomics Jun 29 2023 The main purpose of Lectures on Macroeconomics is to characterize and explain fluctuations in output, unemployment and movement in prices. Lectures on Macroeconomics provides the first comprehensive description and evaluation of macroeconomic theory in many years. While the authors' perspective is broad, they clearly state their assessment of what is important and what is not as they present the essence of macroeconomic theory today. The main purpose of Lectures on Macroeconomics is to characterize and explain fluctuations in output, unemployment and movement in prices. The most important fact of modern economic history is persistent long term growth, but as the book makes clear, this growth is far from steady. The authors analyze and explore these fluctuations. Topics include consumption and investment; the Overlapping Generations Model; money; multiple equilibria, bubbles, and stability; the role of nominal rigidities; competitive equilibrium business cycles, nominal rigidities and economic fluctuations, goods, labor and credit markets; and monetary and fiscal policy issues. Each of chapters 2 through 9 discusses models appropriate to the topic. Chapter 10 then draws on the previous chapters, asks which models are the workhorses of macroeconomics, and sets the models out in convenient form. A concluding chapter analyzes the goals of economic policy, monetary policy, fiscal policy, and dynamic inconsistency. Written as a text for graduate students with some background in macroeconomics, statistics, and econometrics, Lectures on Macroeconomics also presents topics in a self contained way that makes it a suitable reference for professional economists.

Macroeconomics Mar 03 2021 Carlin and Soskice integrate the financial system with a model of the macro-economy. In doing this, they take account of the gaps in the mainstream model exposed by the financial crisis and the Eurozone crisis. This equips the reader with a realistic modelling framework to analyse the economy both in crisis times and in periods of stability.

Leading Solutions Mar 27 2023 This book on business psychology—particularly organizational leadership—crosses industries, continents, and business environments: it includes 45 précis on emerging theories of leadership; ethical and cultural considerations; group and team leadership; leadership self-development; management philosophy and practice; organizational diagnosis and cultural dynamics; personality and lifespan in the workplace; professional development; qualitative research methods; psychological, socio-cultural, and political dimensions of organizations; the role of technology in organizations; strategic change management; and systems theory. The material ranges widely but is pithy: each précis offers in easy bites the latest "take" on the subject, drawing from popular textbooks, recommended readings, case studies, group exercises, personal experience, and self-reflection; each was written as a key to understanding and change with an eye to re-imagining leadership in the 21st century. Both rigorously researched and entertaining, this book addresses the fast-changing realities of organizational leadership in domestic and international settings across the private, public, and nonprofit sectors: it will serve as a valuable quick-access resource for practitioners and students.

Dynamic Macroeconomics Jun 25 2020 An advanced treatment of modern macroeconomics, presented through a sequence of dynamic equilibrium models, with discussion of the implications for monetary and fiscal policy. This textbook offers an advanced treatment of modern macroeconomics, presented through a sequence of dynamic general equilibrium models based on intertemporal optimization on the part of economic agents. The book treats macroeconomics as applied and policy-oriented general equilibrium analysis, examining a number of models, each of which is suitable for investigating specific issues but may be unsuitable for others. After presenting a brief survey of the evolution of macroeconomics and the key facts about long-run economic growth and aggregate fluctuations, the book introduces the main elements of the intertemporal approach through a series of two-period competitive general equilibrium models—the simplest possible intertemporal models. This sets the stage for the remainder of the book, which presents models of economic growth, aggregate fluctuations, and monetary and fiscal policy. The text focuses on a full analysis of a limited number of key intertemporal models, which are stripped down to essentials so that students can focus on the dynamic properties of the models. Exercises encourage students to try their hands at solving versions of the dynamic models that define modern macroeconomics. Appendixes review the main mathematical techniques needed to analyze optimizing dynamic macroeconomic models. The book is suitable for advanced undergraduate and graduate students who have some knowledge of economic theory and mathematics for economists.

Speculative Bubbles, Speculative Attacks, and Policy Switching Oct 29 2020 The papers in this book are grouped into three sections: the first on price bubbles is primarily financial; the second on speculative attacks (on exchange rate regimes) is international in scope; and the third, on policy switching, is concerned with monetary policy.

Economically Sensible Solutions for Linear Rational Expectations Models with Forward and Backward Looking

Dynamic Processes Apr 15 2022 Using variants of a modified version of Dornbusch's model of price level and exchange rate dynamics, it is demonstrated that satisfaction of the formal condition for existence of a unique non-explosive solution of a linear rational expectations model with forward and backward looking dynamic processes (equality of the number of stable roots with the number of independent backward looking processes) does not guarantee the economic sensibility of this solution, even if one accepts the usual arguments for excluding "speculative babbles" from the solutions of such models. Moreover, satisfaction of the formal condition for existence of an infinity of non-explosive solutions for such rational expectations models (more stable roots than independent backward looking processes) does not assure that any of these solutions is economically sensible

Methods of Solution and Simulation for Dynamic Rational Expectations Models Sep 08 2021 Abstract: Many methods have been proposed for the solution and simulation of medium or large size models under the assumption of rational expectations. The purpose of this paper is to present these methods, and to show how and where each can be applied. The methods fall into two groups. Methods in the first can be used to solve for perfect foresight paths in non-linear models. Methods in the second can be used in linear models, to solve either for paths or processes followed by endogenous variables. All the methods described here have been used in empirical applications and computer algorithms are available for most.

Rational Expectations Models with a Continuum of Convergent Solutions Jun 05 2021 This paper examines five examples of rational expectations models with a continuum of convergent solutions and demonstrates serious difficulties in the economic interpretation of these solutions. The five examples are (1) a model of optimal capital accumulation with a negative rate of time preference, (2) Taylor's (1977) linear rational expectations model of macroeconomic equilibrium; (3) Calvo's (1984) model of contract setting and price dynamics; (4) Obstfeld's (1984) equilibrium model of monetary dynamics with individual optimizing agents; and (5) Calvo's (1978) life-cycle model of savings and asset valuation. In every case, when these models yield a continuum of convergent infinite horizon solutions, these solutions fail to exhibit economically appropriate, forward looking dependence of the endogenous variables on the paths of the exogenous forcing variables—a difficulty that does not arise under the circumstances where these models yield unique convergent infinite horizon solutions. Further, the three models that have natural finite horizon versions, either lack finite horizon solutions or have solutions that do not converge to any of the infinite horizon solutions. Again, this difficulty arises only under the circumstances where these models have a continuum of infinite horizon solutions.

Local Energy Autonomy Jan 30 2021 In recent years, interest for local energy production, supply and consumption has

increased in academic and public debates. In particular, contemporary energy transition discourses and strategies often emphasize the search for increased local energy autonomy, a phrase which can refer to a diverse range of configurations, both in terms of the spaces and scales of the local territory considered and in terms of what is meant by energy autonomy. This book explores policies, projects and processes aimed at increased local energy autonomy, with a particular focus on their spatial, infrastructural and political dimensions. In doing so, the authors – Sabine Barles, Bruno Barroca, Guilhem Blanchard, Benoit Boutaud, Arwen Colell, Gilles Debizet, Ariane Debourdeau, Laure Dobigny, Florian Dupont, Zélia Hampikian, Sylvie Jaglin, Allan Jones, Raphael Ménard, Alain Nadaï, Angela Pohlmann, Cyril Roger-Lacan, Eric Vidalenc – improve our understanding of the always partial and controversial processes of energy relocation that articulate forms of local metabolic self-sufficiency, socio-technical decentralization and political empowerment. Comprising fifteen chapters, the book is divided into four parts: Governance and Actors; Urban Projects and Energy Systems; Energy Communities; and The Challenges of Energy Autonomy.

Macroeconomic Theory Dec 12 2021 This graduate textbook is a "primer" in macroeconomics. It starts with essential undergraduate macroeconomics and develops in a simple and rigorous manner the central topics of modern macroeconomic theory including rational expectations, growth, business cycles, money, unemployment, government policy, and the macroeconomics of nonclearing markets. The emphasis throughout the book is on both foundations and presenting the simplest model for each topic that will deliver the relevant answers. The first two chapters recall the main workhorses of undergraduate macroeconomics: the Solow-Swan growth model, the Keynesian IS-LM model, and the Phillips curve. The next chapters present four fundamental "building blocks" of modern macroeconomics: rational expectations, intertemporal dynamic models, nonclearing markets and imperfect competition, and uncertainty. Later the book deals with growth, notably the Ramsey model, overlapping generations, and endogenous growth. Chapter 10 moves to the famous "real business cycles" (RBC), which integrate in a unified framework growth and fluctuations. The final chapters look at the issue of stabilization, how best to guard the economy from shocks, and the connections between politics and the macroeconomy. To make the book self contained, a mathematical appendix gives a number of simple technical results that are sufficient to follow the formal developments of the book.

Human/Machine Aug 20 2022 Will the workplace of the future be overrun by machines and robots? Are the new frontiers of artificial intelligence (AI) on the cusp of dethroning us in efficiency, intelligence and innovative potential? Automation and AI will augment our human world and potential. The winners of the future of work are those that harness the power of machines to their advantage. Human/Machine is the only guide you need to understand the fourth industrial revolution. It sets out a road map to the challenges ahead, but also unlocks the wondrous opportunities that it offers. Human/Machine explores how we will work symbiotically with machines, detailing how institutions, companies, individuals and education providers will evolve to integrate seamlessly with new technologies. With exclusive case studies, this book offers a glimpse into the future and details how top companies are already thriving on this very special relationship. From gamification in job training to project management teams integrated with bots and predictive technologies that fix problems in the supply chain before they happen, the authors deliver a powerful manifesto for the adoption and celebration of automation and AI. In a much more fluid, skills-based economy, we will all need to prove our worth and future-proof our skills base. This book offers a blueprint to avoid being left behind and unearth the opportunities unique to human-machine partnership ecosystems.

Advanced Macroeconomics Dec 24 2022 Macroeconomic policy is one of the most important policy domains, and the tools of macroeconomics are among the most valuable for policy makers. Yet there has been, up to now, a wide gulf between the level at which macroeconomics is taught at the undergraduate level and the level at which it is practiced. At the same time, doctoral-level textbooks are usually not targeted at a policy audience, making advanced macroeconomics less accessible to current and aspiring practitioners. This book, born out of the Masters course the authors taught for many years at the Harvard Kennedy School, fills this gap. It introduces the tools of dynamic optimization in the context of economic growth, and then applies them to a wide range of policy questions – ranging from pensions, consumption, investment and finance, to the most recent developments in fiscal and monetary policy. It does so with the requisite rigor, but also with a light touch, and an unyielding focus on their application to policy-making, as befits the authors' own practical experience. *Advanced Macroeconomics: An Easy Guide* is bound to become a great resource for graduate and advanced undergraduate students, and practitioners alike.

Macroeconomic Fluctuations and Policies Jun 17 2022 The basic tools for analyzing macroeconomic fluctuations and policies, applied to concrete issues and presented within an integrated New Keynesian framework. This textbook presents the basic tools for analyzing macroeconomic fluctuations and policies and applies them to contemporary issues. It employs a unified New Keynesian framework for understanding business cycles, major crises, and macroeconomic policies, introducing students to the approach most often used in academic macroeconomic analysis and by central banks and international institutions. The book addresses such topics as how recessions and crises spread; what instruments central banks and governments have to stimulate activity when private demand is weak; and what "unconventional" macroeconomic policies might work when conventional monetary policy loses its effectiveness (as has happened in many countries in the aftermath of the Great Recession.). The text introduces the foundations of modern business cycle theory through the notions of aggregate demand and aggregate supply, and then applies the theory to the study of regular business-cycle fluctuations in output, inflation, and employment. It considers conventional monetary and fiscal policies aimed at stabilizing the business cycle, and examines unconventional macroeconomic policies, including forward guidance and quantitative easing, in situations of "liquidity trap"—deep crises in which conventional policies are either ineffective or have very different effects than in normal time. This book is the first to use the New Keynesian framework at the advanced undergraduate level,

connecting undergraduate learning not only with the more advanced tools taught at the graduate level but also with the large body of policy-oriented research in academic journals. End-of-chapter problems help students master the materials presented. Macroeconomics, Fourth Canadian Edition Jan 25 2023 One of the most rigorous and comprehensive books in intermediate macroeconomics, Blanchard and Johnson not only convey the "life" of macroeconomics, but also present macroeconomics as a coherent whole. Macroeconomics incorporates the current global economic crisis making the concepts and lessons easier to grasp. This new edition continues to provide an integrated view of macroeconomics allowing you to make sense of macroeconomic events.

Evolution of the International and Regional Monetary Systems Mar 15 2022 The papers in this book cover the wide range of Robert Triffin's expertise. For example, Jacques Larosiere interprets the evolution of the international monetary system. Michel Aglietta critically appraises the international monetary system and suggests the present system is one that does not constrain domestic policy choices. The desirability, scope and means of policy co-ordination are analyzed in the contributions by James Tobin, Robert Solomon, John Williamson, Alexandre Lamfalussy and Wolfgang Rieke. Tommaso Padoa-Schioppa discusses the possible paths to European Monetary Union whilst Alfred Steinherr and Jacques Girard evaluate the past and future evolution of the ECU. Paul De Grauwe provides empirical answers to the highly debated question whether the EMS is a DM-zone.

Reform in Eastern Europe May 17 2022 This incisive report identifies and describes the major policy choices to be made and discusses what will work and what will not.

Service Oriented, Holonic and Multi-agent Manufacturing Systems for Industry of the Future Nov 30 2020 This volume gathers the peer reviewed papers presented at the 11th edition of the International Workshop on Service-oriented, Holonic and Multi-Agent Manufacturing Systems for the Industry of the Future, SOHOMA'21, organized on 18-19 November, 2021 by the Arts et Métiers Institute of Technology of Cluny, France in collaboration with University Politehnica of Bucharest (the CIMR Research Centre in Computer Integrated Manufacturing and Robotics), Polytechnic University Hauts-de-France (the LAMIH Laboratory of Industrial and Human Automation Control, Mechanical Engineering and Computer Science) and Polytechnic Institute of Bragança (the CeDRI Research Centre in Digitalization and Intelligent Robotics).

Reconstructing the World Economy Feb 11 2022 This volume presents papers from a conference organized by the Korea Development Institute and the IMF. The purpose of this high-level conference was for policymakers and academics from the Asian region and from G-20 countries to discuss forward-looking economic and financial issues of interest to the international community, such as restoring normalcy to fiscal policy, macroprudential regulation, the future of the financial system, global fiscal imbalances, and the international monetary system. Topics include: (1) A strategy for renormalizing fiscal and monetary policies in advanced economies. Key principles for restoring financial stability in the wake of the crisis, including the timing and sequence for exit, are identified. (2) Rethinking macroeconomic policy. This section examines if and how macroeconomic policy should respond to sectoral imbalances and asset-price and housing imbalances, as well as a potential role for macroprudential regulation. (3) Redesigning the financial system of the future. Responses by both policymakers and the private sector to recent events are evaluated in terms of how they will shape the future financial system and its role in the global economy. (4) Global imbalances. The argument is made that there is an urgent need to address the domestic and international distortions that are a key cause of imbalances; failure to do so would threaten the sustainability of the recovery. (5) The future of the international monetary system. Steps that can be taken to address the inherent weaknesses in the current system are described, including possible solutions on both the demand side and on the supply side.

In the Wake of the Crisis Sep 28 2020 Prominent economists reconsider the fundamentals of economic policy for a post-crisis world. In 2011, the International Monetary Fund invited prominent economists and economic policymakers to consider the brave new world of the post-crisis global economy. The result is a book that captures the state of macroeconomic thinking at a transformational moment. The crisis and the weak recovery that has followed raise fundamental questions concerning macroeconomics and economic policy. These top economists discuss future directions for monetary policy, fiscal policy, financial regulation, capital-account management, growth strategies, the international monetary system, and the economic models that should underpin thinking about critical policy choices. Contributors Olivier Blanchard, Ricardo Caballero, Charles Collins, Arminio Fraga, Már Guðmundsson, Sri Mulyani Indrawati, Otmar Issing, Olivier Jeanne, Rakesh Mohan, Maurice Obstfeld, José Antonio Ocampo, Guillermo Ortiz, Y. V. Reddy, Dani Rodrik, David Romer, Paul Romer, Andrew Sheng, Hyun Song Shin, Parthasarathi Shome, Robert Solow, Michael Spence, Joseph Stiglitz, Adair Turner

Modern Macroeconomics May 05 2021 A textbook that approaches modern macroeconomics through its microeconomic foundations, with an emphasis on financial market connections and policy applications. The modern study and analysis of macroeconomics begins by considering how microeconomic units—consumers and firms—make decisions, and then investigates how these choices interact to yield economy-wide outcomes. This innovative textbook takes this “modern” approach, teaching macroeconomics through its microeconomic foundations. It does so by adopting the representative agent paradigm. By modeling the representative consumer and the representative firm, students will learn to describe macroeconomic outcomes and consider the effects of macroeconomic policies. Unique in its coverage of monopolistic competition, financial markets, and the interaction of fiscal and monetary policy, *Modern Macroeconomics* is suitable for use in intermediate undergraduate, advanced undergraduate, and graduate level courses. The book first introduces the building blocks of macroeconomics, the heart of which is the representative consumer. It goes on to offer a brief history of macroeconomic thought, including supply-side economics, the Phillips curve, and the New Keynesian framework. It then covers two policy applications, monetary policy and the interaction of monetary and fiscal policy; optimal policy analysis for both the flexible price and the rigid price case; long-run steady states, treating the Solow growth framework and the

neoclassical growth model; a search-and-matching framework for the analysis of unemployment; and the application of the tools of modern macroeconomics to “open economy,” or international macroeconomics. End-of-chapter problem sets enable students to apply the concepts they have learned. A separate Solutions Manual will be available for students to purchase. Teaching materials, including complete solutions and slides, will be available to qualified instructors.

Growth, Productivity, Unemployment Apr 23 2020 The essays in this book extend and elaborate on many of the important ideas Solow has either originated or developed in the past three decades.

Macroeconomics Jul 19 2022 This volume provides a unified framework for the analysis of short- and medium-run macroeconomics. It develops a core New Keynesian macro model based on imperfect competition and nominal rigidities and shows how this compares with alternatives.

Study Guide to Accompany Macroeconomics Oct 22 2022

Systems, Institutions, and Values in East and West Jan 13 2022 Leading social scientists, empirical analysts, and policy practitioners demonstrate the various ways in which the insights of János Kornai, a renowned early analyst and critic of the command economies of Eastern European communist states, are stirring academic and policy discussions about current challenges. While dissecting the economic theories and practices in the Soviet Bloc, Kornai devised and applied concepts such as soft-budget constraints, rush versus harmonic growth, surplus versus shortage economy, non-Walrasian equilibrium, bureaucratic coordination, and the invisible power of the communist party. These concepts are commonly applied to a variety of issues in the contexts of fundamental transformation. The cases discussed in this volume include the transitional paths of post-communist economies, the pitfalls of East European market-building, economic repercussions of the dissolution of Yugoslavia, and the process of integration in the Eurozone. In conclusion János Kornai's thoughts on a variety of research topics as well as the value of democracy are included as he delivered at the conference celebrating his 90th birthday in 2018.

Linear Rational Expectations Models Nov 10 2021

Study Guide Aug 08 2021 David Findlay, of Colby College, has once again done an outstanding job of writing a student-friendly study guide. Each chapter begins with a presentation of objectives and review. It is organized in the form of a tutorial, covering the important points of the chapter, with learning tips along the way. The tutorial is followed by quick self-test questions, review problems, and multiple-choice questions. Solutions are provided for all Study Guide problems.

Fiscal Policy, Stabilization, and Growth May 24 2020 Fiscal policy in Latin America has been guided primarily by short-term liquidity targets whose observance was taken as the main exponent of fiscal prudence, with attention focused almost exclusively on the levels of public debt and the cash deficit. Very little attention was paid to the effects of fiscal policy on growth and on macroeconomic volatility over the cycle. Important issues such as the composition of public expenditures (and its effects on growth), the ability of fiscal policy to stabilize cyclical fluctuations, and the currency composition of public debt were largely neglected. As a result, fiscal policy has often amplified cyclical volatility and dampened growth. 'Fiscal Policy, Stabilization, and Growth' explores the conduct of fiscal policy in Latin America and its consequences for macroeconomic stability and long-term growth. In particular, the book highlights the procyclical and anti-investment biases embedded in the region's fiscal policies, explores their causes and macroeconomic consequences, and assesses their possible solutions.

Radical Solutions for Education in Africa Jan 01 2021 This book explores the state of open education in terms of self-directed learning on the African continent. Through a combination of conceptual, systematic literature review and empirical chapters, readers will get a research-based impression of these aspects in this area. Apart from presenting existing wider trends regarding open education, this book also reports on effective open practices in support of self-directed learning.

Solutions Manual for "Introduction to Modern Economic Growth" Apr 03 2021 This is an essential companion to Daron Acemoglu's landmark textbook, *Introduction to Modern Economic Growth*. Designed for students, this manual contains solutions to selected exercises located throughout Acemoglu's text, helping students to maximize and reinforce their understanding of the material. Students will find this book invaluable for coursework and self-study.

Mathematics for Economists Jul 07 2021 This innovative text for undergraduates provides a thorough and self-contained treatment of all the mathematics commonly taught in honours degree economics courses. It is suitable for use with students with and without A level mathematics.

Macroeconomics Sep 20 2022

Backward and Forward Solutions for Economies with Rational Expectations Feb 23 2023

Study Guide and Tutorial, Second Edition, Macroeconomics, Olivier Blanchard Sep 01 2023 David Findlay, of Colby College, has done an outstanding job of writing a student-friendly study guide. Each chapter begins with a presentation of objectives and review. It is organized in the form of a tutorial, covering the important points of the chapter, with learning suggestions along the way. Quick self-test questions, review problems, and multiple-choice questions follow the tutorial. Solutions are provided for all Study Guide problems.

Macroeconomics Nov 22 2022 Develop a unified view of the latest global macroeconomic events, connecting the short, medium, and long-run markets. *Macroeconomics: A European Perspective*, 4th edition by Blanchard, Amighini & Giavazzi, offers the European perspective based on the best-selling US text by leading author Olivier Blanchard, presenting an integrated, global view of macroeconomics, and showing the connections between goods markets, financial markets, and labour markets worldwide. An essential textbook for students studying Macroeconomics at an intermediate level, this is a book rooted in the real world: from the major economic crisis of the late 2000s to the profound economic effects caused by the COVID-19 pandemic, from monetary policy in the US to Brexit, the problems of the Euro area, and growth in China, this

edition will help you make sense not only of current macroeconomic events but also those that may unfold in the future. Key features include: A new chapter 'The COVID economic crisis' examines the economic impact of the COVID-19 pandemic. A new appendix, 'What do macroeconomists do?', explores career options for those thinking about taking their Macroeconomics study further. Organised into two distinct parts: a core section focuses on short, medium, and long-run markets, and two extensions offer more in-depth coverage of the issues. Margin notes help re-create a student-teacher dialogue, further explaining more challenging concepts. Focus boxes discuss real macroeconomic events and facts from Europe, the United States, and around the world. With a series of features and digital resources to help you cement your learning, this is a must-have textbook on the European perspective reflecting all major contemporary changes in the field. Also available with MyLab® Economics MyLabis the teaching and learning platform that empowers you to reach every student. By combining trusted author content with digital tools and a flexible platform, MyLabEconomics personalises the learning experience and improves results for each student. If you would like to purchase both the physical text and MyLab® Economics, search for: 9781292360966 Macroeconomics: A European Perspective Paperback, 4th Edition plus MyLab Economics with Pearson eText. Package consists of: 9781292360898 Macroeconomics: A European Perspective Paperback, 4th Edition 9781292360935 Macroeconomics: A European Perspective Paperback, 4th Edition MyLab® Economics 9781292360973 Macroeconomics: A European Perspective Paperback, 4th Edition Pearson eText MyLab® Economics is not included. Students, if MyLab is a recommended/mandatory component of the course, please ask your instructor for the correct ISBN. MyLab should only be purchased when required by an instructor. Instructors, contact your Pearson representative for more information.

Mathematical Reviews Aug 27 2020

Macroeconomics Jul 31 2023 Blanchard presents a unified and global view of macroeconomics, enabling students to see the connections between the short-run, medium-run, and long-run.

Combating Inequality Jul 27 2020 Leading economists and policymakers consider what economic tools are most effective in reversing the rise in inequality. Economic inequality is the defining issue of our time. In the United States, the wealth share of the top 1% has risen from 25% in the late 1970s to around 40% today. The percentage of children earning more than their parents has fallen from 90% in the 1940s to around 50% today. In *Combating Inequality*, leading economists, many of them current or former policymakers, bring good news: we have the tools to reverse the rise in inequality. In their discussions, they consider which of these tools are the most effective at doing so.
